Computer Collar® v4.5 RIG00-12807 & RIG00-12808

Invisible Fence® Brands' release of the v4.4 and v4.5 series Computer Collar® receivers introduced the backward compatibility function to the Computer Collar® R22 housing. The following bulletin will cover the features and functions of this Computer Collar®.

- The transition to v.4.5 did not change any of the programming or operational functions. The change helped to improve the noise filtering capabilities allowing the power cap to last to its maximum potential.
 - 700 and 800 Series operation
 - 7K and 10K Function
 - Tone Only (0,5)
 - Independent Programming of Amp and Pulse rate (0 x 5 matrix)
 - Four Perfect Start® training levels (0,1 – 0,4)
 - Independent Outdoor and Indoor/Shields® correction settings
 - Six Delay settings 0 – 5 (0 = No Delay, 1 – 5 = approx.. 1/3 sec. each)
 - ICT Indoor/Outdoor/Both programming compatibility
 - Shields® Channel A, B and A&B compatibility (Shields® operation can be disabled using a CF3000)
 - Low Battery Indicator Light flashes Red and Green
 - History record stored for total power on days, total power caps used and corrections administered over the last 6 power caps (Total Power Caps and corrections can be reset with the CF3000)
 - Failsafe feature allows the receiver to correct while in the signal field, automatically shutting off after 10 seconds.
